Tell car makers to make cleaner-air vehicles!

Fill in the address of vehicle manufacturer here (see back).

Clean air is patriotic!
It's healthy!
It's peaceful!

Ask for Clean Air / OIL-less Options

Technologies exist that auto makers could use now to help us all breathe cleaner air...

Dear Auto Manufacturer CEO and Board of Directors:

I am writing to ask that your organization begin as soon as possible to make your vehicles more efficient and less detrimental to the quality of our air.

There are currently available technologies on-the-shelf such as:

- Continuously Variable Automatic Transmissions (CVT)
- Variable-Valve-Control-Engines
- Integrated Starter-Generators (ISG)
- Hybrid, Fuel-cell, and hydrogen energy technologies
- Switching from steel to aluminum, a stronger, lighter metal

... that will make most passenger vehicles, including SUVs, more environmentally friendly, and economical to operate. Please have your engineers and design staff begin phasing these technologies into your production cycles as soon as possible.

A reasonable Corporate Average Fuel Efficiency (CAFE Standard) by 2012 is 50 miles per gallon. Give these targets your best effort for the benefit of us all. Work toward zero auto emissions by 2020. And fit all vehicles with interior air handling systems that exclude external air when desired by the occupants.

The 1st three items on the list above have been shown to more than double fuel efficiency in SUVs, and save consumers as much as three times as much as they would cost to install in new vehicles.

I drive a:

- Sport Car ... _____ (Model optional)
- Sedan ... _____
- Van ... _____
- SUV ... _____
- Other model: _____

I drive, but I don't like breathing polluted air.

I don't drive but I breathe the air that automobiles help to befoul, poison, and pollute.

Please do the right thing and make your automobiles as efficient as technologically possible given the available and emerging knowledge and techniques. Underwrite aggressive research and development of petroleum-alternative fuel technologies.

And consider research and development of technologies that will help make existing vehicles more efficient and less detrimental to our air and environments. These vehicles will be on our roads for many years to come and should be made as efficient and as environmentally neutral as possible, as soon as possible.
